5. Presets

Double USM allows you to choose from four different preset (Default, HiRaLoAm (darker), HiRaLoAm (lighter) and Creative) or to create your own.

If you are used to work on images that are roughly the same size in pixel (maybe they came from the same camera), or you post produce your images for a specific output (the web, printers, etc.) this is a really useful feature. Once you crafted the perfect values for your workflow just save them as a preset and recall with a simple click.

To do this just choose Amount and Radius for both Dark and Light halos and a Threshold and then click on "New." "Remove" lets you delete a preset you don't use anymore (you can delete the default ones) and "Reset" deletes all but the default presets.

Remember it is nearly impossible to find a combination of values that works nicely with every picture: depending on the file size, the dimension of the details you want to enhance and other issues like noise or the different outputs that can occur, you probably need to change your set of values from time to time.

That said, we found this presets extremely well balanced for standard situations, you can use them as they are or as a starting base to try and experiment on your own.

To better understand how this value affects your images take a look at the following examples.

6. Halos

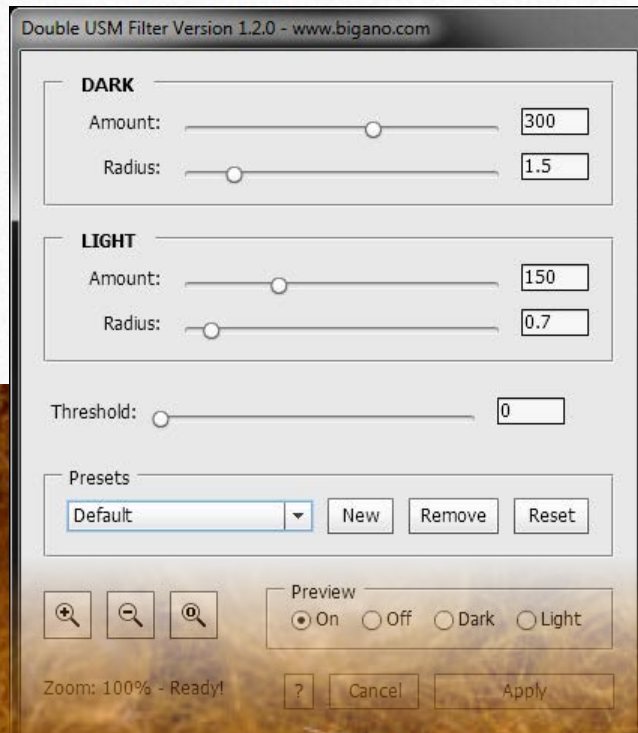

Double USM is a Photoshop script that splits the Unsharp Mask filter into its core components (Dark and Light halos) and lets you customize their Amount and Radius separately.

The apparent detail that Unsharp Mask filter is creating out of nowhere is made with halos that appear along “borders.” Let’s call borders where areas of different luminosity meet. Dark halos are created on the darker area’s border; Light halos are created on the lighter area’s border.

Traditional Unsharp Mask filter doesn’t allow you to control them separately (Amount and Radius) - which is exactly what Double USM is here for

7a. Examples - Traditional Sharpening (Preset: Default)

Traditional sharpening is aimed at the improvement of fine detail (small features). To reach this goal is better to get bigger dark halos (Radius) and stronger effect (Amount) than Light Halos. This is needed because Light Halos are more disturbing and give the impression of oversharpening; they need to be toned down somehow.

Default Values Preset "Default": D (300, 1.5), L (150, 0.7), T (0) as example below. Optimized for offset print. Reduce layer's opacity at 70% for digital printers, or at 50% for the internet and monitor display.

7b. Examples - HiRaLoAm Sharpening (Preset: HiRaLoAm Darker/Lighter)

HiRaLoAm sharpening add a 3D look at your images enhancing the shape of the subjects. "HiRaLoAm" stands for High Radius, Low Amount. Bigger radii (unusually wide) at low Amounts (lower than 100%) sculpt the subject and add shape.

Default Values Preset "Hirhaloam Darker" : D (50, 50), L (30, 30), T (2) "Lighter": D (30, 30), L (50, 50), T (2) as example below - The difference when printed is much more evident.

7c. Examples - Mixed Sharpening (Preset: Creative)

A mixed sharpening routine takes the best of both worlds. It uses Low Radius and High Amount for Dark Halos (as in traditional) to boost fine detail combined with High Radius and Low Amount (as in HiRaLoAm) for Light Halos to add shape.

Default Values Preset "Creative" : D (300, 1), L (40, 40), T (2)

Example below: D (300, 1), L (50, 20), T (2) - Optimized for offset print. Reduce Double USM layer's opacity at 70% for digital printers, or at 50% for the internet and monitor display.

La Dolce Vita. An Era Ends By Dan Margulis

They say that Italians get emotional at times like this, and that Italians love beautiful things. I admit to feeling a bit Italian myself as I write this. I *have* developed an emotional attachment to the country, no doubt. And the relationships I have entered into with several of my students in that country have evolved into something, well, profoundly loving. The old joke has it that in heaven, all lovers are Italian. Right offhand I can think of a couple of exceptions to this generality, but there is no need to go off-topic.

The truth is that it is a land of love and great beauty, made all the more beautiful professionally by seeing the new and sophisticated imaging algorithms being developed by Davide with Marco Olivotto, and by seeing how Alessandro, Daniele Di Stanio, Tiziano Fruet and others have brought first-class color instruction into a country where it was rarely found previously.
