### 4. The Equalizer

Similarly to music equalizer, Wow! allows you to control the tonal values, sharpness and local contrast of your file, working on the higher (finest details), medium or low, (large areas) frequencies.

You can modify positive or negative values. Use positive (upward) to add sharpness (with higher frequencies) or boost the local contrast (with lower frequencies). Use negative values moving the sliders downward. This will soften the image with a very pleasant result. Wow! performs its best when mixing positive and negative values, adding a very personal and powerful look to your images, whether the subject is a wedding, an event or a commercial.

### **5. The Presets**

Wow! video embeds six presets designed to meet different requiremets. The values are optimized for Full HD (1920x1080 px) and must be considered a starting point. We strongly invite you to test all the presets with different subjects and play with the sliders. Don't forget to play with the opacity. An effect too harsh at 100% may be perfect at 70%. By default opacity is set at 70%.

Export time is around three minutes for one minute of footage, but if you uncheck the luminosity tab it will be slower.

You can access to the preset from the scroll down menu, or manually input the numeric values or, much more easier, move the cursor and see instantly the result in preview.

### 6. The "Wow Factor"

Any image is made of fine detail and coarser areas. Controlling these independently is the key to the winning look which has "The Wow! Factor". How does it work? In the unique Wow! panel, through five dedicated sliders whose values can be either positive or negative you can control separately sharpening, shape and smoothing. Start with one of our presets, and tweak the sliders to reach what is optimal for you.

KNOW HOW TRANSFER the photography knowledge hub

## Know-How Transfer – The Photography Knowledge Hub

A new platform by the same team who developed ALCE, formerly RBG Group or Bigano and associates.

Everyone dealing with photography and digital imaging will find a unique mix of instructional and how-to content here. We offer applications specifically designed by photographers for photographers, as well as effective tutorials and free resources. Our mission is to create a community, a Central Hub of Photography Knowledge, where photographers can exchange experiences, share information and grow their skills. Read more about our team here >

Many of them come from the school of the great Dan Margulis and still have a very special relationship with him. I'm pleased to report here what he wrote about this group taken from his famous post "La Dolce Vita - An era ends":

They say that Italians get emotional at times like this, and that Italians love beautiful things. I admit to feeling a bit Italian myself as I write this. I \*have\* developed an emotional attachment to the country, no doubt. And the relationships I have entered into with several of my students in that country have evolved into something, well, profoundly loving. The old joke has it that in heaven, all lovers are Italian. Right offhand I can think of a couple of exceptions to this generality, but there is no need to go off-topic. The truth is that it is a land of love and great beauty, made all the more beautiful professionally by seeing the new and sophisticated imaging algorithms being developed by Davide with Marco Olivotto, and by seeing how Alessandro, Daniele Di Stanio, Tiziano Fruet and others have brought first-class color instruction into a country where it was rarely found previously.
